### Portfolio profile

The portfolio is suitable for investors seeking global exposure to developed and developing equity markets through an investment solution that is diversified across fund managers, including both active and passive investment strategies. The primary goal is maximum capital appreciation over the long-term and investors should have a high tolerance for short-term market volatility in order to achieve this long-term objective.

1) Total Expense Ratio (TER), expressed as a percentage of the Fund, relates to expenses incurred in the administration of the Fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction Costs (TC), expressed as a percentage of the Fund, relate to the costs incurred in buying and selling the underlying assets of the Fund. TC are a necessary cost in administering the fund and impact fund returns. It should not be considered in isolation as returns may be impacted by other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. The Total Investment Charges expressed as a percentage of the Fund, relates to all investment costs of the Fund. Calculations are based on actual data where possible and best estimates where actual data is not available. Both the TER and TC of the Fund are calculated on an annualised basis, however these cannot be determined accurately because the Fund was recently launched and has a short track record.

## Portfolio attributes

The Select Fund of Funds range consists of simple, low-cost investment solutions that offer broad diversification across asset classes, fund managers and investment strategies, which can easily be incorporated into a financial planning process. Each solution is equally weighted across five fund managers. Rebalancing, back to the target weights of 20% per fund, takes place on a quarterly basis. Importantly, no performance fees are charged.

20% is invested in a low-cost, passive fund that simply tracks the MSCI World Index

80% is invested in actively managed global equity funds that are only allowed to invest in shares listed on the domestic stock exchange.

We believe as a combined solution these funds will most consistently achieve the Select Global Equity objective of outperforming its peer group average over a rolling 5-year period, with the added benefit of lower volatility.
